This exploration of the ways in which pregnancy affects narrative begins with two canonical American texts, Nathaniel Hawthorne's *The Scarlet Letter* (1848) and Harriet Jacobs's *Incidents in the Life of a Slave Girl* (1861). Relying on such diverse works as *Frankenstein*, *Peyton Place*, *Beloved*, and *I Love Lucy*, the book chronicles how pregnancy evolves from a conventional plot device into a mature narrative form. Especially in the 20th and 21st centuries, the pregnancy narrative in fiction and film acts as a lightning rod with the power to electrify all genres of fiction and film, from early melodrama (*Way Down East*) to noir (*Leave Her to Heaven*); from horror (*Rosemary's Baby*) to science fiction and dystopia (*Alien*, *The Handmaid's Tale*); and from iconic (*Lolita*) to independent (*Juno*, *Precious*). Ultimately, the pregnancy narrative in popular film and fiction provides a remarkably clear lens by which we can gauge how popular American film and fiction express our most profound--and most private--fears, values and hopes.

Each of us are alive for a very limited time. Or are we? What if we could live not just for a century, but for millennia? What if there were a way for us to never die? Is such a thing even remotely possible? It may not only be feasible; it may very well have been achieved in the distant past. Ancient aliens may well have uncovered the secrets behind slowing, and ultimately completely stopping, the aging process. History is filled with accounts of fantastic beings, powerful gods, and half-human/half-alien entities that had extraordinarily long lifespans. Many such stories are now largely dismissed as nothing more than the stuff of legend, folklore, and mythology. But what if the accounts are all too real? Highlights of Immortality of the Gods include: The story of the legendary Anunnaki, how they achieved everlasting life, and why they shared their secrets with Noah, Methuselah, and other biblical figures. The saga of Gilgamesh, a long-lived part-human, part-extraterrestrial Sumerian ruler who was obsessed with immortality. A study of the claims that one of the reasons for the 2003 invasion of Iraq was to uncover the millennia-old secrets of white powder gold, a manna-like substance that supposedly rejuvenates cells and tissue.

In 1846, Edgar Allen Poe wrote that 'the death of a beautiful woman is, unquestionably, the most poetic topic in the world'. The conjunction of death, art and femininity forms a rich and disturbing strata of Western culture, explored here in fascinating detail by Elisabeth Bronfen. Her examples range from *Carmen* to *Little Nell*, from *Wuthering Heights* to *Vertigo*, from *Snow White* to *Frankenstein*. The text is richly illustrated throughout with thirty-seven paintings and photographs.

Close Encounters of the Fourth Kind: cases in which personal contact between an individual or individuals is initiated by the "occupants" of the spacecraft. Such contact may involve the transportation of the individual from his or her terrestrial surroundings into the spacecraft, where the individual is communicated with and/or subjected to an examination before being returned. One might expect that a "scientific conference" devoted to people who have reported being kidnapped by "little green men" would be dismissed out of hand. But C.D.B. Bryan, the greatly admired journalist and author of *Friendly Fire*, did not dismiss it: the conference was to be held at the Massachusetts Institute of Technology and would have as its chairmen a Pulitzer Prize-winning Harvard psychiatry professor and a professor of physics from M.I.T. Bryan attended the conference throughout its five days. He approached the subject with no prior stand, no agenda, and an open (if slightly skeptical) mind. As the conference progressed, he was astonished by the quality of the stories told by the hundreds of men and women who came forward hesitantly and reluctantly with their utterly amazing—and utterly convincing—accounts of having been abducted and then examined aboard extraterrestrial spacecraft by spindly limbed, telepathic gray creatures with outsized foreheads dominated by huge, compelling, tear-shaped black eyes. What most astonished Bryan were the similarities found again and again in these accounts and the consistency of their details. It is here that the heart of the mystery lies: as the Harvard professor John E. Mack asked at the conference, "If what the abductees are saying isn't happening to them, then what is?" This question—and the possible answers—are at the center of this richly explicit, serious, and riveting book. Bryan recreates the conference. He interviews ufology's most prominent psychiatrists, psychologists, hypnotherapists, researchers, physicists, physicians, and folklorists. He interweaves throughout the testimony

of the abductees themselves, who tell us their stories in chilling detail. He presents, in depth, the Close Encounter experiences of two women whose stories he tells on the basis of both their spontaneous recollections of the events and their memories that were retrieved through sessions of hypnosis of which Bryan himself was a witness. Finally, Bryan examines the current theories—psychological, psychiatric, medical, parapsychological—that have been put forward by the unconvinced to explain the abduction phenomenon. Are the abductees suffering from some sort of false memory syndrome? . . . a multiple or dissociative personality disorder? . . . Are they fantasy-prone? Close Encounters of the Fourth Kind is a detailed, objective exploration—the most concrete to date—of one of the enduring and amazing mysteries of our time. It is a book that will equally fascinate believers and nonbelievers.

When it comes to bacterial disease, we are living in a state of false security. Antibiotics have indeed brought unprecedented health benefits, protection from and cure of bacterial diseases during the past 50 years. But there are ominous signs that the fortress and the defenses built on antibiotics are crumbling. They are crumbling because we wittingly or unwittingly created selective conditions for the emergence of superior pathogens that can no longer be controlled by antibiotics. There are numerous warnings. After a long period of eclipse tuberculosis has now emerged as a serious threat unchecked by antibiotic treatment. Recent years have seen reports of cholera epidemics, of anthrax infections, of serious problems with *Salmonella* and even with *E. coli*, just to name a few. Mankind is in a race with microbial invaders. The challenge is to anticipate and respond to developments that affect the precarious balance between man and microbe. This will require new knowledge and it will take time for an effective application of that knowledge.

Are there 10,000-year-old secret societies that still exist today? Was there a race of giants that once inhabited the Americas? Did ancient Egypt and ancient China have heretofore undiscovered ties? *Lost Secrets of the Gods* delves into these ancient mysteries and many more in articles by some of the world's most intrepid and knowledgeable researchers. The old paradigms of history are being radically transformed as we discover more evidence of little-known cultures and what they achieved. Many ancient cultures spoke and wrote of visitors that gave them knowledge and helped shape their societies. Who were they, and where did they come from? We now know that many ancient cultures had advanced knowledge of science, agriculture, and astronomy, only some of which has been rediscovered in the last 100 years. Were *The Iliad* and *The Odyssey* really about an epic struggle in pre-Celtic Europe? What happened to the Persian army that completely disappeared from Egypt 2,500 years ago? Did the ancients know how to create psychic guard dogs to protect sacred sites? There is much more to history than what has officially been recorded. *Lost Secrets of the Gods* reveals startling truths and asks fascinating questions traditional historians have long ignored.

From bestselling author Gabor Maté, the essential resource for understanding the roots and behaviors of addiction--now with an added introduction by the author. Based on Gabor Maté's two decades of experience as a medical doctor and his groundbreaking work with the severely addicted on Vancouver's skid row, *In the Realm of Hungry Ghosts* radically reenvision this much misunderstood field by taking a holistic approach. Dr. Maté presents addiction not as a discrete phenomenon confined to an unfortunate or weak-willed few, but as a continuum that runs throughout (and perhaps underpins) our society; not a medical "condition" distinct from the lives it affects, rather the result of a complex interplay among personal history, emotional, and neurological development, brain chemistry, and the drugs (and behaviors) of addiction. Simplifying a wide array of brain and addiction research findings from around the globe, the book avoids glib self-help remedies, instead promoting a thorough and compassionate self-understanding as the first key to healing and wellness. *In the Realm of Hungry Ghosts* argues persuasively against contemporary health, social, and criminal justice policies toward addiction and those impacted by it. The mix of personal stories—including the author's candid discussion of his own "high-status" addictive tendencies—and science with positive solutions makes the book equally useful for lay readers and professionals.

There are days when, if we hunt or fish or watch birds, we just want to be alone with our thoughts. Other times, however, contemplating the great outdoors that contains so many unknowns, we may wish to learn about moaning moose . . . or mumbling carp . . . or magnetic deer. And this is where Robert M. Zink enters the scene. A writer who humorously bridges the gap between esoteric information and nature as we have come to know it, Zink distills the latest news from the world of science into three-minute bursts of irresistible lore for the layman. In these brief, engaging essays readers will discover, for instance, how deer use the earth's magnetic field for orientation; a long-gone tradition of hunting loons in North Carolina; how

porcupine quills are advancing new ideas about delivering inoculations; and why deer antlers can model bone regeneration for amputees. How do predator-prey cycles get started? Should we worry about black bear attacks in the woods? Zink has the answers—often to questions we didn't think to ask but wish we had. This is the outdoors at its mysterious best, as the experience of nature and the findings of science combine to educate our sense of wonder and tickle our fancy—to say nothing of our highly unscientific funny bone.

Everyone has heard of Close Encounters of the Third Kind. But what about close encounters of the fatal kind? The field of UFOs is rife with unsettling examples of suspicious deaths. Accounts of accidents that might not have been accidents after all, abound. Researchers and witnesses have vanished, never to be seen again. Conveniently timed heart attacks are reported. Out-of-the-blue suicides that, upon investigation, bear the distinct hallmarks of murder, are all too common. And grisly deaths at the hands of both extraterrestrials and government agents have occurred. Highlights of Close Encounters of the Fatal Kind include: The strange saga of the incredible melting man. The UFO-related death of the first U.S. Secretary of Defense, James Forrestal. The mysterious disappearances of military pilots and their connection to UFOs. The connections between national security and the sudden deaths of UFO investigators. Getting too close to the cosmic truth about alien abductions, Roswell, and what the government really knows about UFOs can—clearly—be a deadly business. The government's latest admission of the existence of Area 51 is barely the tip of a very big iceberg.
